

# DG-1000 Emulation

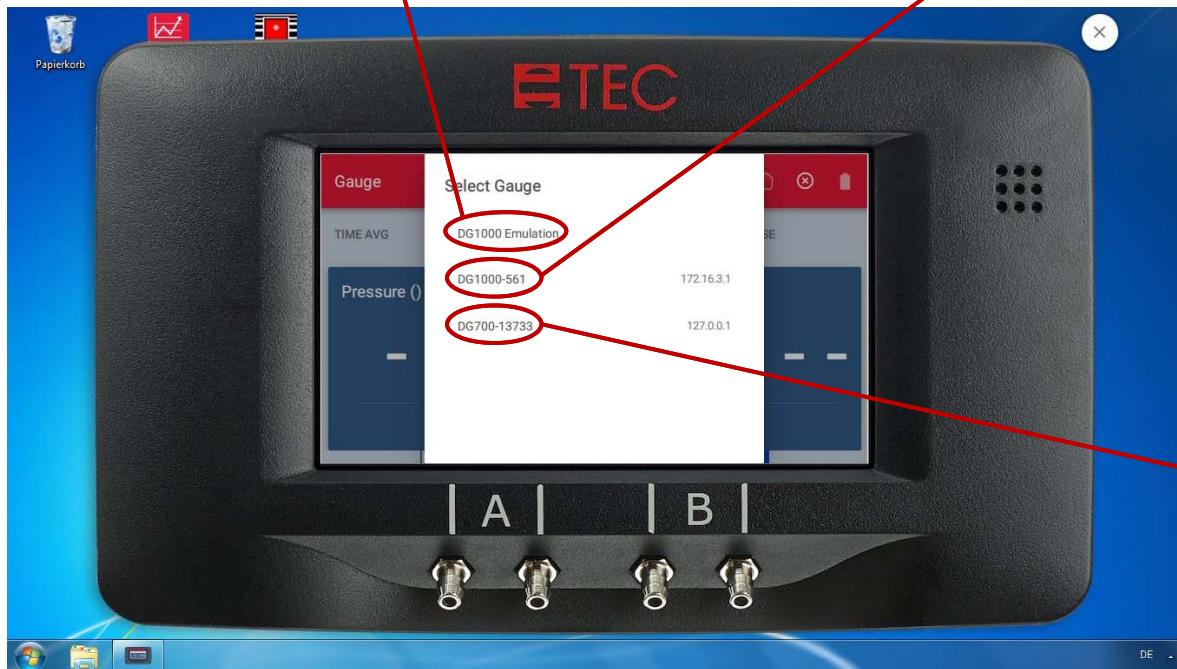

DG-1000 Connect is the perfect tool for training and practice situations. The display of the pressure gauge can be projected on a large screen so that the operations can be shown to a larger audience.

## Connection Options

- The program DG-1000 Connect can either
- emulate the pressure gauge DG-1000 on a Windows computer or
  - show the measurement data of a real DG-1000.

DG-1000 Connect also allows to display the measurement data of a DG-700 (previous BlowerDoor pressure gauge) if it is connected to the computer.

## Starting DG-1000 Emulation

Once the program has been installed, click the DG-1000 Connect icon on the desktop to open:

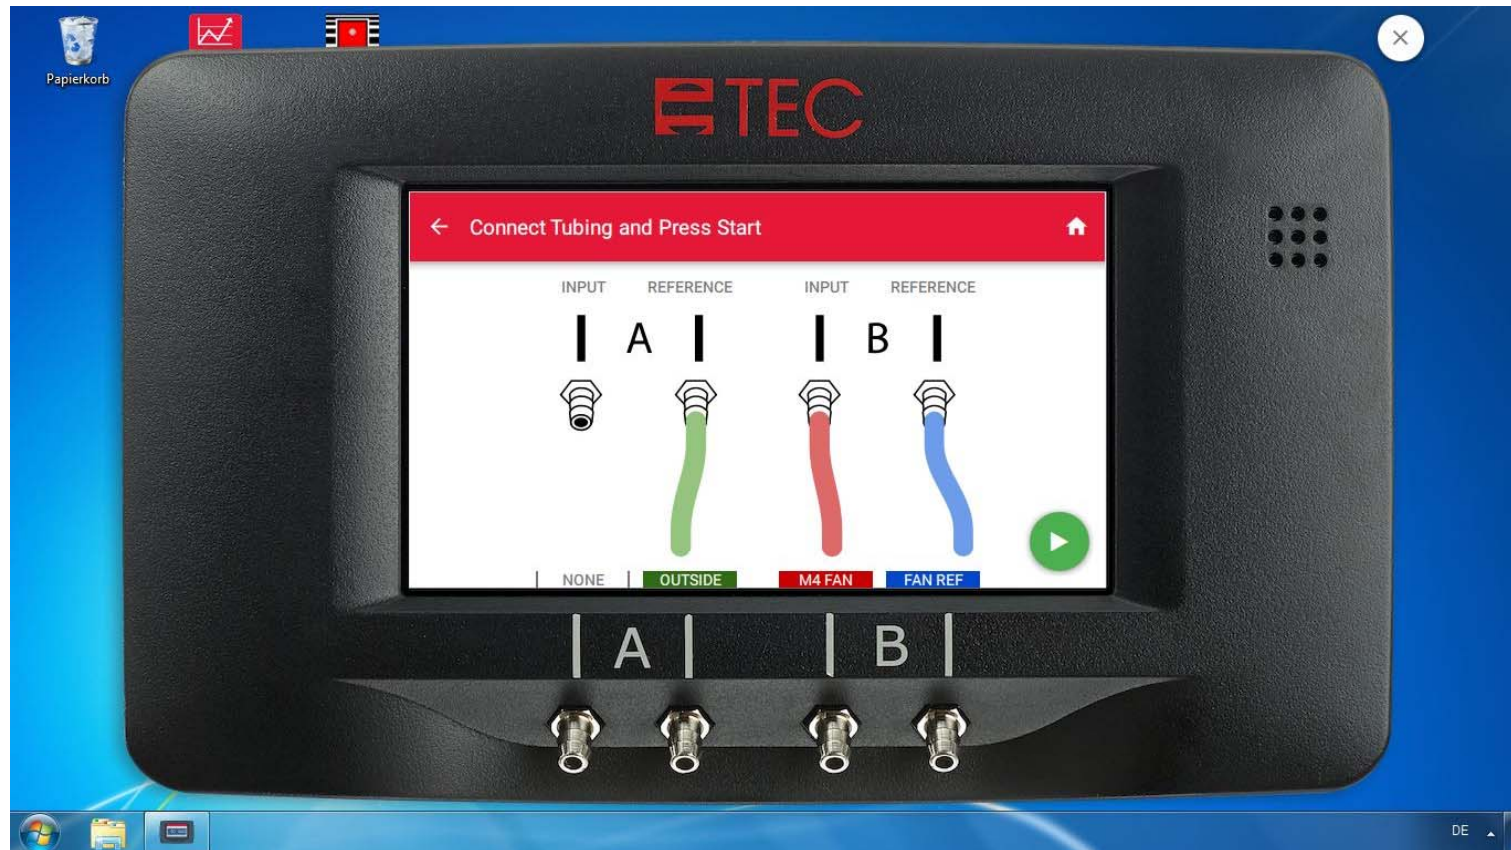

# DG-1000 Apps

All functions (apps) of the DG-1000 are emulated and can be started from here:

# DG-1000 Tubing Assistant

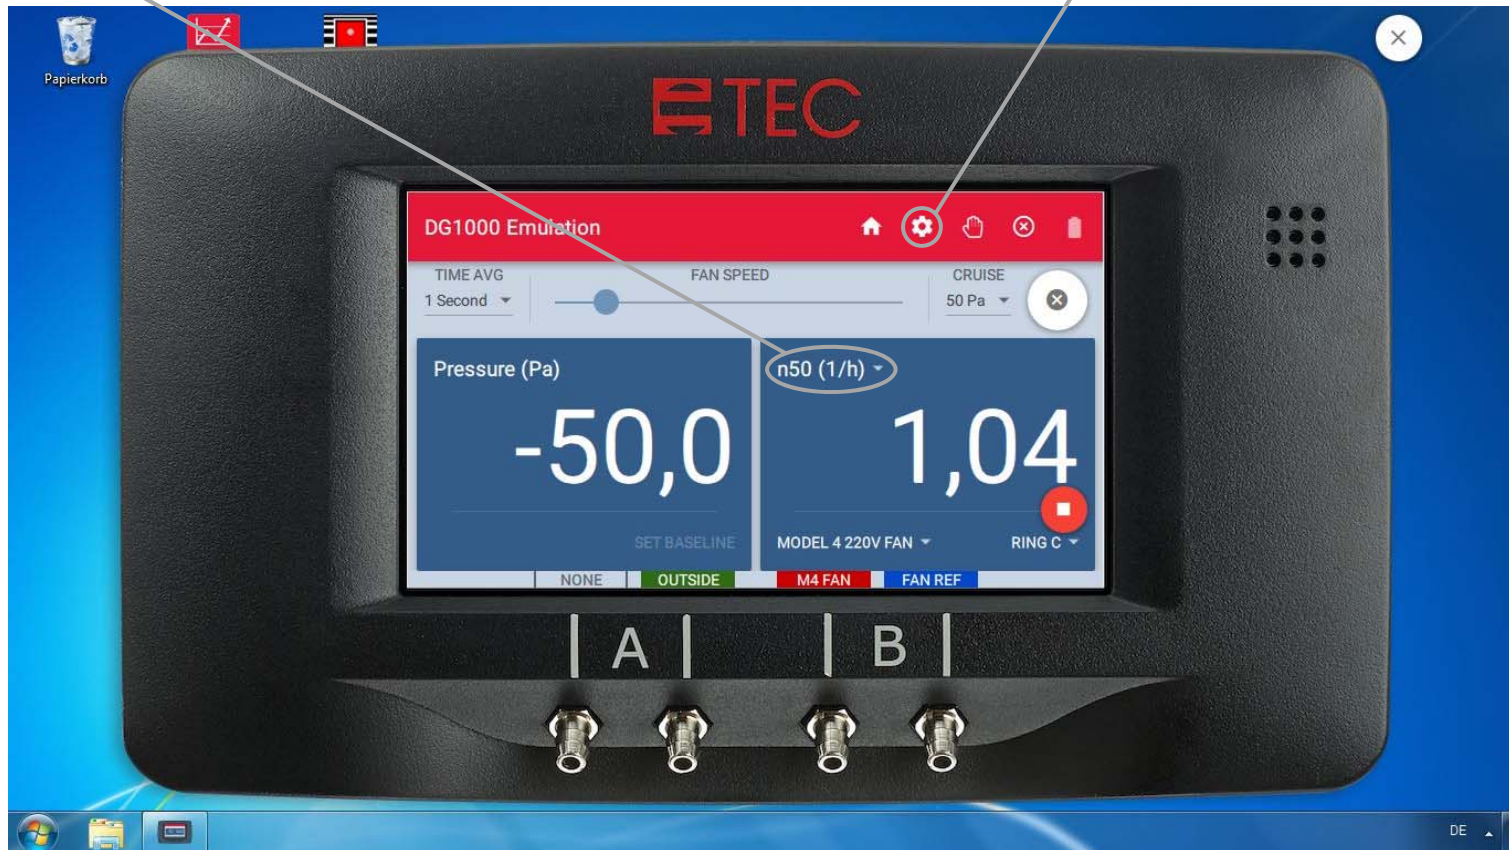

This is our popular “Tubing Assistant” for easier orientation when connecting tubes to the measuring devices:

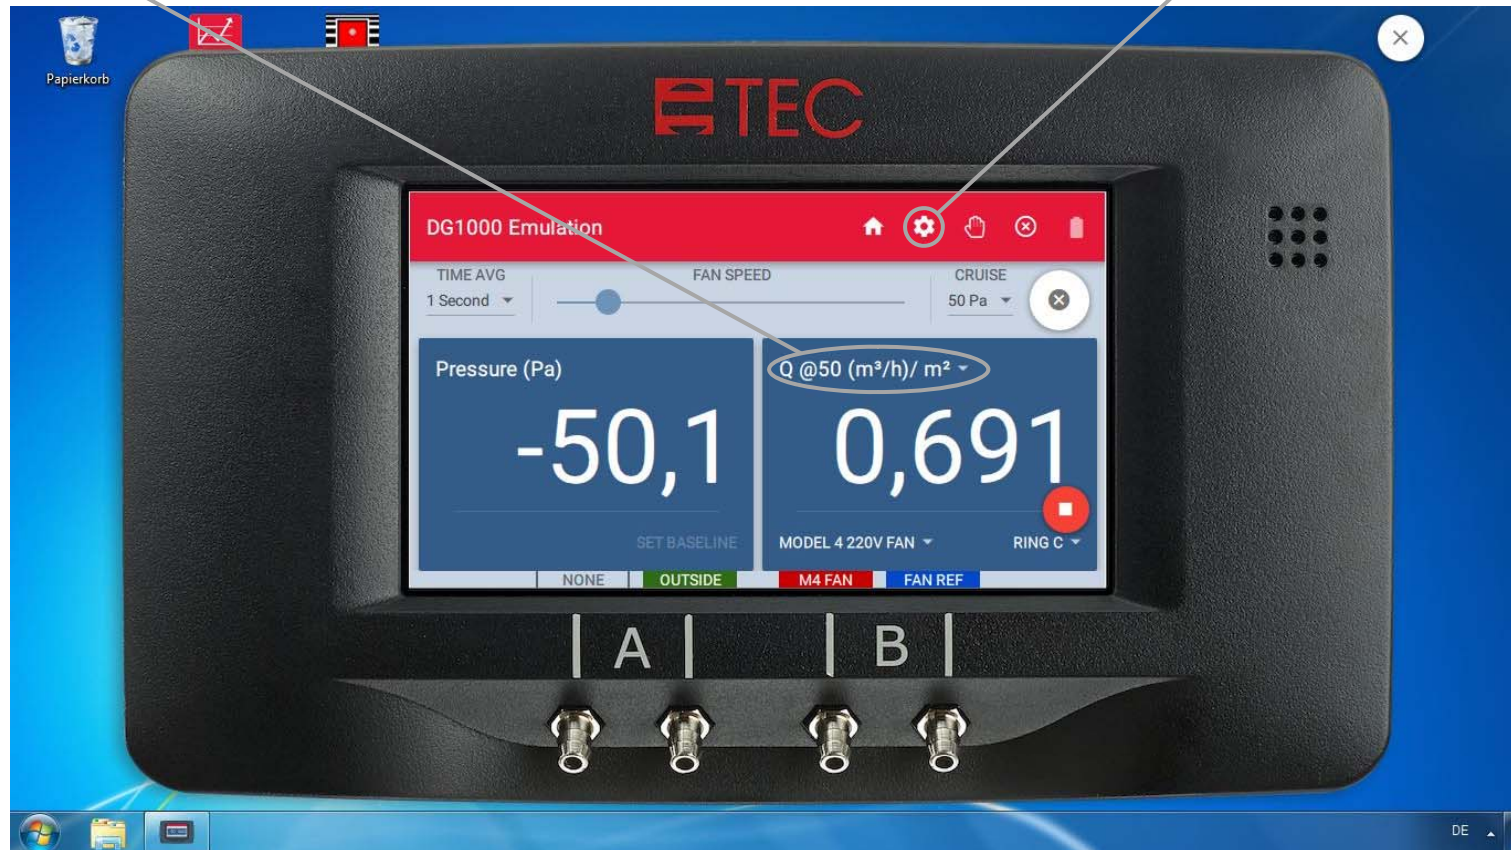

# DG-1000 Gauge App

When entering the building volume in the Gauge App Settings the air change rate is calculated and displayed:

# DG-1000 Gauge App

When entering the building envelope area in the Gauge App Settings the air permeability is calculated and displayed:
